SCN NO : 207977608

BATCH : JAVA INSTITUTE GRIFFINS BATCH

# Interpreter Design Pattern

- An Interpreter pattern says that "to define a representation of grammar of a given language, along with an interpreter that uses this representation to interpret sentences in the language".

- Basically, the Interpreter pattern has a limited area where it can be applied.

- This pattern can be applied for parsing the expressions defined in simple grammar and sometimes in simple rule engines.

# Scenario

- Develop an application that converts the current date into any given format such as MM-DD-, DD-MM-, and YYYY-MM-.
